

KASHYAP[®]
ANTI-SCALE SYSTEM[®]

A BETTER & GREENER
ALTERNATIVE TO WATER SOFTENERS

SCALE DEFENCE

TREATS HARD WATER FOR A SUPERIOR WASH

KASHYAP®

Scale Defence

The water we use in our houses contains dissolved salts of calcium and magnesium that develop as scale deposits over time. Limescale is deposited on various parts of Washing Machine like the water filter heating element, within the appliance pipes and the drums with every washing cycle. This deposit reduces the efficiency of the appliance and shortens its overall life span. A better wash is guaranteed only on using less detergent along with a refreshed water supply. Scale Defence turns the water supply without scales, which in turn improves the quality of washing.

Scale-related problems

- Loss of energy due to a longer heating process
- High costs of repairs and maintenance on the washing machine.
- Loss of water pressure due to decreased pipe diameters
- High cleaning costs and the need for aggressive cleaning agents
- Decrease in overall productivity

The Kashyap Scale Defence eliminates the limescale deposits thereby retaining the condition of the appliance. This enhances the overall performance, washing quality, and increases the lifespan of the machine.

What are the Advantages of Scale Defence?

A 100 % Maintenance-free Eco-Friendly Electronic System

Kashyap is an advanced Engineering product that uses an electronic Impulse-Technology that treats water without applying any chemicals or salt. The electronic impulse changes the crystallization process of minerals like calcium and magnesium in hard water which leads to particles losing their ability to stick to surfaces

No-Maintenance &
Improved performance

The max. working
life of equipment

1 Year warranty
